

Why you need an Ionic Air Purifier?

Most people understand that the pollution we face daily is often generated from industrial factories, cars, trucks, buses, etc. However, the fact is that there's a HUGE amount of pollution that is found in your home? **The Environmental Protection Agency reports that "bad INDOOR AIR is the #1 environmental health threat" – NOT factories and automobiles.**

It all began in earnest in the 70's when everyone began to seal up their homes to save energy. Unfortunately, 'sealing up' can also result in 'sealing in' from many sources, including toxins. The sources of pollution can come from your floor, carpet, walls, ceiling, duct work, disinfectants, molds, mildew, hairsprays, cologne, pets, and even dead skin! **About eighty percent (80%) of the stuff floating around your home is dead skin and "dust mites" love that!**

Contaminates consist of invisible particles, gases and microbiological organisms - over time, they can wear down your immune system and become vulnerable to a variety of diseases. We tend to think of our home as our refuge, but "indoor air" can affect everyone from infants to seniors. **This silent, serious, long-term health threat is in nearly every home, office and indoor environment and it's called "indoor pollution".** The average person may never suspect that many of their symptoms may be caused, or aggravated, by these slow acting, invisible toxins.
